## § 92.201

- (17) The weighted brake specific emissions for HC, CO,  $NO_X$  and particulate (g/BHP-hr) for the total test for the duty-cycle(s) applicable to the locomotive.
- (18) The smoke opacity for each test mode. This includes the continuous trace, the peak values and the steady-state value.

EFFECTIVE DATE NOTE: At 63 FR 19044, Apr. 16, 1998, §92.133 was added. This section contains information collection and record-keeping requirements and will not become effective until approval has been given by the Office of Management and Budget.

# **Subpart C—Certification Provisions**

#### §92.201 Applicability.

The requirements of this subpart are applicable to manufacturers and remanufacturers of any locomotives and locomotive engines subject to the provisions of subpart A of this part.

#### §92.202 Definitions.

The definitions of subpart A of this part apply to this subpart.

### §92.203 Application for certification.

- (a) For each engine family that complies with all applicable standards and requirements, the manufacturer or remanufacturer must submit to the Administrator a completed application for a certificate of conformity.
- (b) The application must be approved and signed by the authorized representative of the manufacturer or remanufacturer.
- (c) The application will be updated and corrected by amendment as provided for in §92.210 to accurately reflect the manufacturer's or remanufacturer's production.
- (d) Required content. Each application must include the following information:
- (1)(i) A description of the basic engine design including, but not limited to, the engine family specifications, the provisions of which are contained in §92.208;
- (ii)(A) For freshly manufactured locomotives, a description of the basic locomotive design;
- (B) For freshly manufactured engines for use in remanufactured locomotives,

- a description of the locomotive designs in which the engines are to be used;
- (C) For remanufactured locomotives, a description of the basic locomotive designs to which the remanufacture system will be applied;
- (iii) A list of distinguishable configurations to be included in the engine family;
- (2) An explanation of how the emission control system operates, including detailed descriptions of:
- (i) All emission control system components:
- (ii) Injection or ignition timing for each notch (i.e., degrees before or after top-dead-center), and any functional dependence of such timing on other operational parameters (e.g., engine coolant temperature);
- (iii) Each auxiliary emission control device (AECD); and
- (iv) All fuel system components to be installed on any production or test locomotive(s) or engine(s);
- (3) A description of the test locomotive or engine:
- (4) Special or alternate test procedures, if applicable;
- (5) A description of the operating cycle and the period of operation necessary to accumulate service hours on the test locomotive or engine and stabilize emission levels;
- (6) A description of all adjustable operating parameters (including, but not limited to, injection timing and fuel rate), including the following:
- (i) The nominal or recommended setting and the associated production tolerances;
- (ii) The intended adjustable range, and the physically adjustable range;
- (iii) The limits or stops used to limit adjustable ranges;
- (iv) Production tolerances of the limits or stops used to establish each physically adjustable range; and
- (v) Information relating to why the physical limits or stops used to establish the physically adjustable range of each parameter, or any other means used to inhibit adjustment, are the most effective means possible of preventing adjustment of parameters to settings outside the manufacturer's or remanufacturer's specified adjustable ranges on in-use engines;
